

# Planning System & Technologyroadmapping for internal toolmaking of Dömer GmbH & Co. KG

## Approach

- Analysis of the order processing process, the technological performance as well as the workpiece requirements and production sequences
  - Analysis of future capacity requirements of typical tools and components
  - Development of four alternative production concepts with regard to utilization and production depth
  - Evaluation and selection of a suitable manufacturing concept in internal toolmaking
  - Derivation of a machine park for the next four years addressing the given requirements and taking into account the strategic framework conditions
- Derivation of an investment roadmap including defined investment recommendations for certain times in specified machine types

## Results

- ▶ **Identification of fields of action for organizational and technological performance**
- ▶ **Investment roadmap to realize a future machine park**
