Measuring Sustainability

Identify your hidden cost savings and improvement potentials with a sustainability maturity assessment

Motivation

Why are we doing what we are doing?

Sustainability is a critical success factor in ensuring your company's competitiveness

You are not exploiting the **full economic potential of sustainable production** through reducing resource consumption and production costs

You are facing **growing regulatory** and **customer** sustainability **demands**, falling behind could cost you earnings.

It is difficult to **acquire capital investments** because your companies'
activities are not sustainable

What's holding you back?

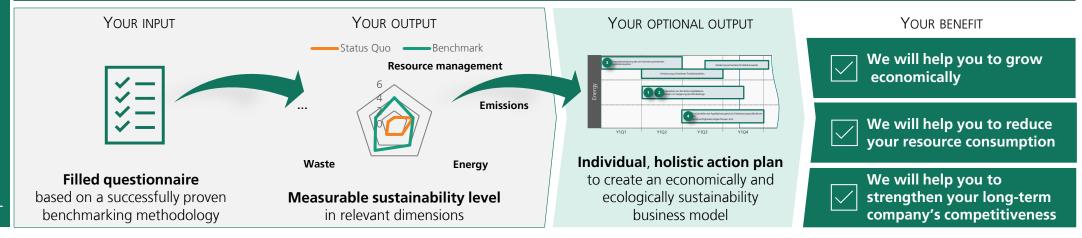

You are unsure about the current and future sustainability regulations as well as your sustainability compared to your peer group

You are **unaware of sustainable value-adding** investments for your company

Solution

What advantage does your company have?

Jumpstart your company's sustainability transformation towards long-lasting competitiveness and success

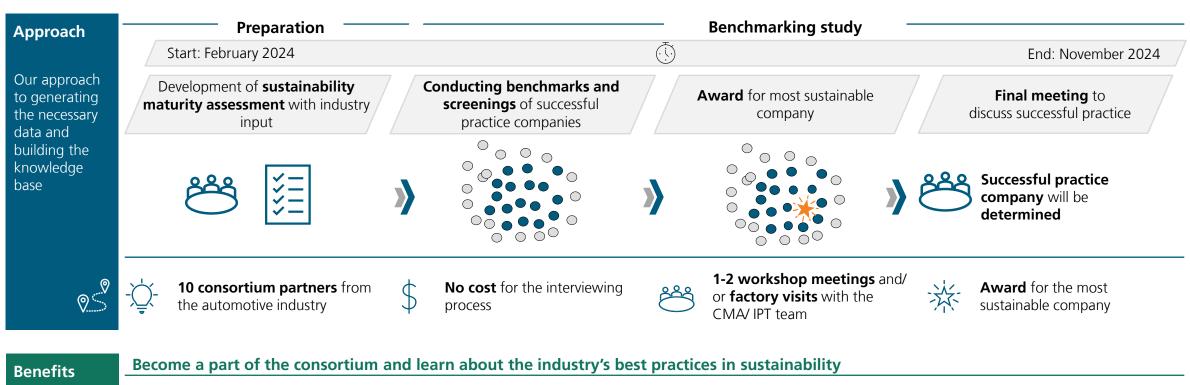

Measuring Sustainability

Become part of the consortium of the benchmarking study and learn about best practices in sustainability

For your partnership,

Extensive **NETWORK** within the consortium to exchange challenges and ideas for solutions

INSIGHTS from the selected successful practices and consolidated lessons learned

SAVING POTENTIALS through individual benchmarking results of your company as well as exclusive access to insights generated

DIRECT SUPPORT for transfer of the identified success criteria of the selected best practices to your company's results

Your Contact to Fraunhofer

Leading personnel of the project

Fraunhofer IPT has extensive, longstanding expertise in manufacturing processes and competences in recording and conducting methodical analysis of processes in production. Additionally, Fraunhofer IPT has an excellent background in deriving optimization measures.
